

Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–1996

Acknowledgements

The U.S. Environmental Protection Agency, Office of Policy, Planning and Evaluation would like to acknowledge the many individual and organizational contributors to this document, without whose efforts this report would not be complete. Although the list of researchers, government employees, and consultants who have provided technical and editorial support is too long to list here, we would like to thank some key contributors whose work has significantly improved this year's report. In particular, we wish to acknowledge the efforts of Dr. Arvin Mosier at the Department of Agriculture's Agricultural Research Service for his groundbreaking work on new methodologies for estimating N₂O emissions from soils; Mr. Arthur Rypinski of the Energy Information Administration who provided detailed statistics and insightful analysis on numerous energy-related topics; Drs. Richard Birdsey and Linda Heath of the U.S. Forest Service for preparing the forest carbon inventory; and Dr. Bo Lim and all her staff at the IPCC Inventory Program whose technical expertise was invaluable in updating and improving the IPCC Guidelines for National Greenhouse Gas Inventories.

Many EPA Offices contributed data, analysis and technical review for this report. The EPA Office of Air and Radiation, in particular, provided hours of analysis and produced the final estimates for many of the source categories addressed in this report. Among the many experts who developed estimates and provided explanatory text and discussion are Dina Kruger, Bill Irving, Elizabeth Dutrow, and Rey Forte in the Office of Atmospheric Programs. Phil Lorang, Harvey Michaels, Joe Somers, and all the staff in the Office of Mobile Sources made a significant contribution to the inventory community by measuring nitrous oxide emissions from motor vehicles in an accelerated summer test program. As always, the Office of Air Quality Planning and Standards and the Office of Research and Development provided data, analysis, and support.

Other government agencies have contributed data as well, including the U.S. Geological Survey, the Federal Highway Administration and the Federal Aviation Administration. In addition, we would like to thank Craig Ebert, Michael Gillenwater and the entire staff of the Global Environmental Issues Group at ICF Incorporated for organizing and integrating many different bits and pieces of data into a cohesive and internally consistent document. Numerous ICF analysts contributed to this inventory including Dana Palmer, Barbara Braatz, Heike Mainhardt, Michael Gibbs, Kenneth Fernandez, Paul Jun, Stephen Abseck, Vikram Bakshi, David Conneely, Brad Kagawa, Beverly Grossman, Karen Lawson, Catherine Leining, Andrew Martin, Elizabeth O'Neill, Muhib Rahman, Holly Simpkins, Deborah Eckbreth, and Alex McDonald.
